

Practical Activity 1[15 marks]

1. Design a database in SQL server with one table and populate it with data using the following design structure:

Column Name	Data Type	Allow Nulls
StudentID	int	☐
Name	nvarchar(50)	☒
Surname	nvarchar(50)	☒
Sport_Code	nvarchar(50)	☐

2. Design a Windows form application and connect it to the database that you have created and add the following controls:
 - ConnectDB button- to connect to the database.
 - Read button- to read data from the database using DataReader
 - Insert button - to insert new data into the database.
 - Update button – to update data in the database.
 - Delete button- to delete certain records from the database.
 - Display button- to display database table data in a DataGridView
 - Exit button- to exit the application.
 - DataGridView- for DB table data display.
3. Use controls such as MessageBox to provide user with feedback.
