

Practical Activity 2 [20 marks]

Mr Bone owns a restaurant in Port Alfred, and he uses a database to keep track of basic transactions and to make informed decisions. The name of his establishment is **Bone's Delicious Kos**. The following is one of the tables in his database system.

Meal Code	Meal	Price
11	Chicken Burger and Chips	120
22	Beef burger and Chips	120
33	Calamari strips	100
44	Steak and Chips or salad	230
55	All Pizzas	190
66	Fish and Chips	130
77	Chicken Curry with Rice	145
88	Beef Curry with Rice	150
99	Buffalo Wings and Chips	200
12	Pork Ribs and chips 600g	350
34	Pork Ribs 300g	250
56	Chicken Schnitzel	110

1. Create Visual studio application and name it **Bone's_Kos** and also Create the table above on SQL server and run the following queries:
 - a. Write a query that will select all the table data and show it in a DataGried View.
 - b. Write a query to select the meal and the price fields only.
 - c. Mr Bone wants to see all meals that have chips as a side, assist him by writing a query that will yield his desired results.
 - d. He also wants to see all meals that cost more than 150, write a query that will produce such results.
 - e. Lastly, select all the table data and sort it by price, from lowest to largest.

NB: Use relevant control of your choice to display the results.
