

PracticalActivity 3 [20marks]

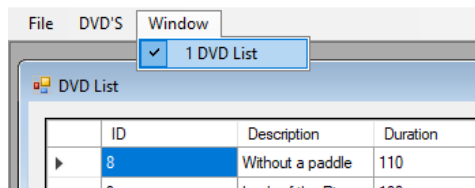

1. Create an MDI form as in Figure 1. The menu contains the following items:

File DVDs Window
-Exit -List DVD

“Exit” terminates the program.

“Window” contains a **list of MDI child forms**.

“List DVD” displays a new form which displays all records in a data grid view

2. Create a Sql server database “Data” with table “DVDs” containing the following columns with appropriate data types.

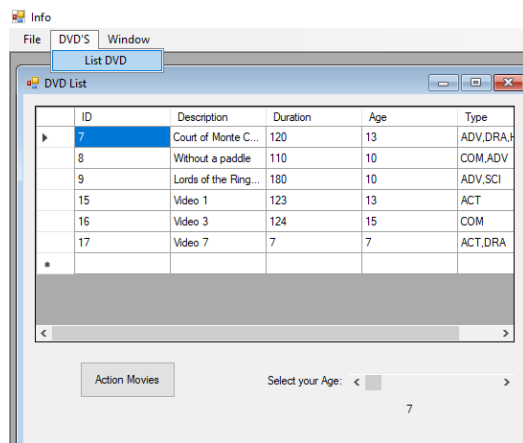

ID
Description
Duration
Age
Type

3. In the database the DVD types are saved as:

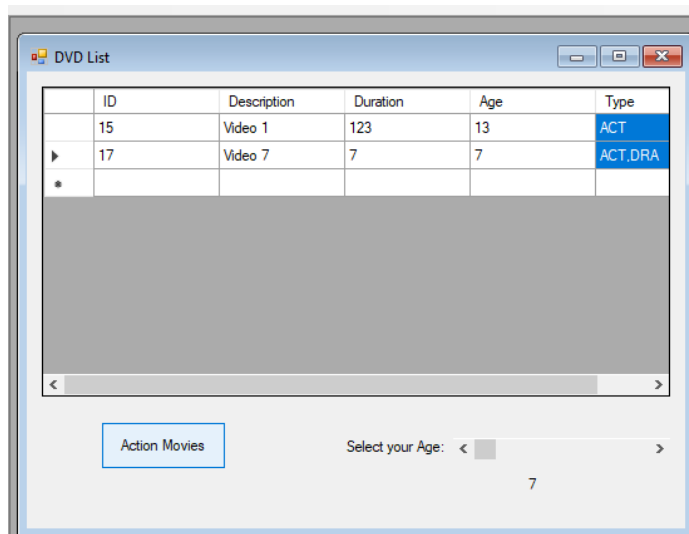

ACT Action
ADV Adventure
COM Comedy
DRA Drama
HOR Horror
SCI Sci-Fi

4. Enter at least 5 records in the database you created. (You can use Figure 2 as guideline)

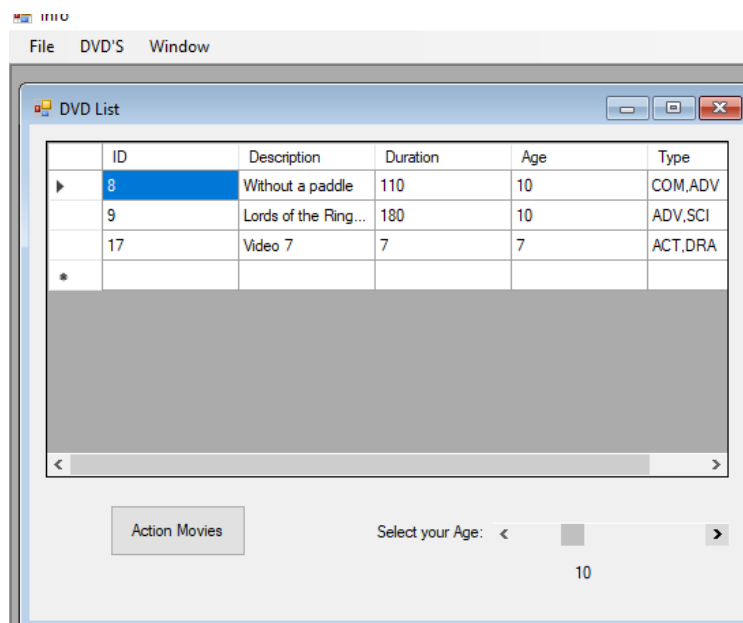

5. Create a form (MDI child) with name “frmDVDNew” as shown below which displays the data on the form. Add a button and and a scrollbar.

6. Button “**Action Movies**”: Display only movies which contains the word ACT in the Type field.

7. Scrollbar “**Select your Age**”: When the user scrolls the scrollbar, filter the records displayed according to the Age.

***Use exception handling
