

Activity 2 Validation and Dropdown lists

Hogback university offers tutorship opportunities to its post graduate students in the school of computer science and information systems. The school has approached you as a software developer to assist them with a web page that can be used by post grads to sign up for this opportunity. Each student is allowed to tutor one module and working hours ranges from 1 to 3 hours.

Develop a webpage that looks like the following:

https://localhost:44380/First

Tutorship Form

Name: Surname: Student ID:

Email Address: Select module: Number of Hours:

Validate all the controls for data input to make sure that the user submits the correct information. If the user clicks the submit button without entering data in some of the fields, they should get error message. Use the following as an example for your validations.

https://localhost:44380/First

Tutorship Form

Name: **Required!** Surname: Student ID: **Required!**

Email Address: **Write a correct email address!** Select module: **Select an Item** Number of Hours: **Enter correct number of working hours!**

[10 marks]
